# Company Background

At Skywealth, we offer a next-generation SaaS platform specifically designed for investment management. Our solution provides users with complete and secure control over their brokerage accounts, enabling the automation of financial operations and real-time optimization of investment strategies, powered by patented technology and artificial intelligence.

With an intuitive interface and advanced tools, Skywealth facilitates informed decision-making and maximizes the performance of your investments, generating consistent returns. Additionally, our philosophy is simple: we only get paid if you make money. Discover how our technology can transform the way you invest, providing you with security, transparency, and efficiency to achieve your financial goals.

# What is an Indexed Algorithm?

Our indexed algorithm operates automatically 24 hours a day within your brokerage account, evaluating market indicators and executing complex algorithmic calculations in real-time.

Thanks to artificial intelligence and mathematical calculations, it can determine when to invest in short positions (when the market is expected to decline) or long positions (when the market is expected to rise) within a financial asset.

Our software tool, or algorithm, is continuously improving and optimizing both autonomously, learning over time, and through our ongoing financial analysis. Each month, we introduce improvements or new features that optimize the performance of your money day by day.

# How Does Our Algorithm Work?

Our indexed algorithm operates automatically 24 hours a day within your brokerage account, evaluating market indicators and executing complex algorithmic calculations in real-time. Thanks to artificial intelligence and mathematical calculations, it can determine when to invest in short positions (when the market is expected to decline) or long positions (when the market is expected to rise) within a financial asset.

Our software tool, or algorithm, is constantly improving and optimizing both autonomously, learning over time, and through our ongoing financial analysis. Every month, we introduce improvements or new features that optimize the performance of your money day by day.

When you register on our website, you must choose the type of membership you want and make the corresponding payment, attach your ID, and sign the contract digitally. Once signed, access to our tool will be provided after proper verification.

When we have received the first fee payment, and your brokerage account has the necessary minimum capital corresponding to your membership, the tool will start operating the next business day.

From that moment on, invoices will be available if profitability is generated. You will have access to the incident area to report any issues with the platform. You can also contact your advisor.

# Work Process

You will have a video call with one of our consultants to resolve any doubts and analyze your case for the best diversification recommendation for your assets and how to register.

Once in the tool, you need to fill in your billing details and enter your username and password provided by your broker to link the algorithm.

During the month, the tool will perform operations in your brokerage account autonomously, and by default, it will operate with minimal risk, meaning it will only consider 25% of your capital.

# Our Business

The cost of our software tool consists of two parts that depend on the membership:

- **Fixed (Membership):** This fee guarantees the security of the platform and the robustness of the calculations, as well as our personnel infrastructure, individual servers, and backups. This cost will be billed to the client.
- **Variable (Financial API Consumption):** This fee depends on the number of operations and the hours of computational calculation. Based on this, we automatically allocate more server and software resources. The cost of this service will be charged every 30 days from the first operation made by the client and will follow this dynamic cycle. The client will be notified 10 days in advance before each billing.

If no profits are generated, the service will be free for the client.

# Memberships

## BASIC

Capital: 2.500€ to 5.000€  
Membership fee: 99€  
API Consumption fee: 30%

## STANDARD

Capital: 5.001€ to 15.000€  
Membership fee: 249€  
API Consumption fee: 25%  
Financial advisory service included.

## BUSINESS

Capital: 30.001€ to 50.000€  
Membership fee: 479€  
API Consumption fee: 20%  
Financial advisory service included

## PROFESSIONAL

Capital: 50.000€ to 99.000€  
Membership fee: 689€  
API Consumption fee: 15%  
Financial advisory service included.

## GOLD

Capital: Over 100,000€  
Membership fee: 999€  
API Consumption fee: 10%  
Private investment group.

# What Returns Can I Achieve?

The expected returns as of today, in a normal scenario, range between 2-3% per week on an investment of 10,000€. \*Past performance does not guarantee future results.

These returns will depend on three factors:

- **Invested Capital:** The amount of money you decide to invest will directly influence potential gains.
- **Selected Membership:** The membership level you choose determines access to additional resources and advanced features.
- **Market Volatility:** Market conditions affect the variability and risk of investments.

We operate with CFDs, which are financial derivatives considered complex due to leverage in operations and high market volatility. The amount available in your account will allow for trading with more or fewer lots. Our algorithms focus on minimizing risk and maximizing profits. The profit or loss obtained in each operation is calculated using the following formula:

$(\text{Open Price} - \text{Close Price}) * \text{Number of Lots}$

# Profitability Data

During the testing period, from February 2022 until today, our indexed algorithm has generated a return of over 110%. Even in the face of widespread market declines, we have managed to mitigate those losses.

How do we achieve these returns?

- Trading on CFDs with a risk management strategy: We use Contracts for Difference (CFDs) to take advantage of market opportunities, always prioritizing efficient risk management.
- Elimination of emotional risk factor: We remove the greatest risk in financial market operations: emotional decision-making. Our algorithm makes decisions based on objective data and mathematical analysis.
- Automatic optimization with artificial intelligence: Our algorithm uses artificial intelligence to assess mathematical factors and market volume, automatically optimizing investment decisions.
- Diversified investment strategy: We open multiple strategic positions to offset potential losses in one of them, ensuring a balanced distribution of risk.

Annual	Quarterly	Monthly
54,3%	21,61%	5,03%

# How Do I See What I Earn?

As a Skywealth client, you will have access to a web platform and a mobile app where you can view all your operations, profits, and losses, automated by our tool.

You will also be able to consult the invoices for the payments you owe us and all the information related to your operations in a simple and easy way.

Additionally, you can access market news where we operate, update your contact or billing information, review our contract, and make payments. All of this is designed to provide you with a comprehensive and convenient experience.

# How Do I Withdraw My Profits?

Through your brokerage account, where you will have the functions to deposit and withdraw capital at any time. We do not hold your money, nor can we access it; you only grant the algorithm access to your investment account.

You can withdraw funds via bank transfer, PayPal, and any other payment method allowed by those platforms (the brokers). We will have access to your username but not to your bank accounts or capital at any time.

The broker will have validated your identification documents, and only you can withdraw money to your bank accounts or electronic wallets such as PayPal or Skrill.

We can only operate with your funds for your benefit.

# Can I Lose My Money?

Our algorithms are designed to minimize risk and maximize profits.

It's true that we always operate with stop-loss orders, which are automatic closure orders, making it practically impossible to lose all the capital in a single operation. Since we operate with CFDs, we work with guarantees that, if exceeded, automatically close the operation.

Therefore, it is unlikely to lose the invested capital if the tool operates autonomously. However, the client has access to the operations and can intervene. If they lack the proper knowledge, they could potentially lose all the capital.

In any case, you will have real-time access to the broker and the platform and can stop everything whenever you consider it necessary.

# Control Your Risk Level

We understand that investing money you've worked hard for can be daunting, but with our innovative tool, you can control how much capital you want to expose to generate returns.

- Limiting the percentage of your account's capital: You can choose how much of your capital you want to use for operations—whether 25%, 50%, or 100%.
- Activating the profit consolidation option: You can instruct the algorithm to stop once a specific amount of profit has been achieved in a day.

# Can the Algorithm Fail?

Internal or external structural factors of the company, such as:

- Power failure in the servers
- Hacking
- Issues with the broker or investment platform

We have an emergency system in place for these situations. Our tool operates in parallel with three other systems located on different continents and using different servers that do not connect with each other. We have constant monitoring, and if the main server fails, another one is automatically activated, which immediately reads the open operations in your profile.

In this way, daily operations would not be affected.

# What Guarantees Do I Have?

We offer two levels of guarantees:

1. **Provided by our technology:** We implement very robust risk management by auditing operations every second. This way, when a negative operation is detected, it opens hedge operations based on mathematical data.
2. **Provided by the Broker:** The guarantees offered by the broker where operations are conducted include being properly regulated by all relevant financial authorities at an international level, with security margin levels that will prevent you from losing your money. We automate operations in your account as if you were performing them yourself.

We engage in operations that we know have a high probability of being profitable, but the market is uncertain, so we achieve a 70-75% success rate against a 30-25% rate of less effective operations.

Sky Guarantee: We only charge you if we make you money.

# Do I Need to Know About Investing?

It is advisable to understand how valuable this tool is, but in reality, by using and contracting our software, which does everything for you, you will have a team of consultants at your disposal. You only need to focus on monitoring your finances, managing your tax returns, and improving your economic management.

If we were to recommend which concepts you should be familiar with and educated about, they would be the following:

- CFDs and Derivatives
- Algorithmic Trading
- Artificial Intelligence in Trading

# Why Choose Our Product?

For us, security and transparency are fundamental keys to our philosophy. As an investor, you will have complete control over your account and capital. The algorithm will always be enabled with the necessary permissions for you to carry out your operations.

## NO COMMITMENT

You can stop the algorithm's activity whenever you want, without conditions or penalties.

## TAX-FINANCIAL ADVISORY

We have experts in taxation and financial advice to provide all the necessary information for filing your taxes and planning your assets.

## INNOVATION

Our algorithm simplifies decision-making in financial operations, continuously improving based on the decisions it makes through artificial intelligence. This makes the results more scalable.

## WIN-WIN

We charge a percentage at the end of the month based on the profits obtained that month. If you do not make a profit, you pay nothing.

## TOTAL TRANSPARENCY

Operations will always be reflected in your client portal, allowing you to see how much was generated by each operation, when each operation was executed, how long each operation lasted, among other important data.

## DAILY RETURNS

When the algorithm generates profits, they are immediately reflected so you can decide whether to accumulate or withdraw them, whenever and wherever you want.
